PROFESSIONAL SUMMARY

Software developer with a practical, project-driven path from mobile app development into full-stack and AI-integrated product engineering. Started by shipping React Native/Expo mobile apps for real institutional and commercial clients — including a multi-role university clearance system and a 135-screen examination platform — then extended into full-stack web development with Next.js, FastAPI, and Supabase to build a quantitative fintech platform and a multi-vertical EdTech SaaS product with payment integration. Recent work adds AI/LLM integration into product features. Comfortable owning a feature end-to-end: building the interface, integrating backend APIs, and testing and debugging across the stack.

TECHNICAL SKILLS

LANGUAGES	TypeScript, JavaScript, Python
MOBILE	React Native, Expo & Expo Router (practical, project-tested); Android app development (multiple apps built and shipped)
FRONTEND	Next.js (App Router), React.js, Tailwind CSS
BACKEND	Node.js, FastAPI, REST API integration, NestJS (in progress)
DATA / INFRA	Supabase, PostgreSQL, Vercel, Git & GitHub
AI / LLM	LLM integration into product features, prompt engineering, AI-assisted workflow design
PAYMENTS	Paystack integration
PRACTICES	Testing & debugging, cross-role platform design, product iteration from MVP to production

SELECTED PROJECTS

SmartClear X	2025
University of Calabar (commissioned by a staff member) · React Native · Expo · TypeScript · Expo Router · AI/LLM integration	
— Problem & build: Nigerian universities process student clearance on paper, a slow process prone to lost documents. Built a multi-role mobile platform (students, department officers, bursary, library, admin) to digitize the workflow end-to-end.	
— My contribution: Designed and built the role-scoped mobile app and integrated an AI layer for document validation and status prediction within the clearance approval chain.	
— Outcome: MVP delivered and demonstrated to commissioning staff at University of Calabar; the project drew interest from staff at two additional Nigerian universities.	
Smart Exam Ecosystem	2025
University of Calabar · React Native · Expo · TypeScript	
— Problem & build: Examination-management platform covering the full exam lifecycle across a university, built for 10 distinct user roles — students, invigilators, registrars, and vice chancellors among them.	
— My contribution: Built out the platform's 135 screens across these roles, an indication of the scope and role-based complexity handled in a single mobile codebase.	

- **Outcome:** MVP complete.

Chop-Spot

2025

Springcore Africa · React Native · Expo Router · REST API integration

- **Problem & build:** Nigerian food-delivery app built in-house for Springcore Africa, with a real backend integration rather than mock data.
- **My contribution:** Built the full order flow and restaurant discovery experience, integrating the Delichops API for live data.
- **Outcome:** Currently in production.

RAMCE — Regime-Aware Momentum Composite Engine

2025 – Present

Angelo Trading Academy · Next.js · FastAPI · Supabase

- **Problem & build:** Quantitative market-intelligence platform tracking 25 financial instruments, applying GARCH volatility modeling, Hurst exponent analysis, and Shannon entropy to detect market regimes.
- **My contribution:** Built the full-stack platform connecting a Next.js frontend to a FastAPI backend with Supabase for data, translating quantitative models into a usable research interface.
- **Outcome:** In production.

Angelo Technology

2025 – Present

Self / Angelo Technology · Next.js 14 · Supabase · Paystack

- **Problem & build:** Multi-vertical digital education platform for the African market, combining learning tracks, bootcamps, a trading academy, and a tools directory in one SaaS product.
- **My contribution:** Built the platform's full-stack architecture and integrated Paystack for payments across the platform's product lines.
- **Outcome:** Live.

Additional mobile development

- Built approximately six Android/mobile applications in total, alongside other mobile projects including Tasty-Cart and Quick-Consult, developing practical experience with React Native across a range of app types.

PROFESSIONAL EXPERIENCE

Web Developer & Technical Tutor

Jul 2022 – Present

Angelo Tech Academy

- **Curriculum development:** Modernized the curriculum to include AI tools and automated workflows, preparing students for current industry practice.
- **Development:** Built and maintained internal web tools using React and Tailwind CSS to streamline student registration and result management.
- **Mentorship:** Mentored a cohort of students in full-stack development, with an emphasis on clean code architecture and scalable design patterns.

EDUCATION

Bachelor of Computer Science (BCS)

Jul 2023 – Present

University of Calabar
