PROFESSIONAL SUMMARY

Self-taught software developer (coding since 2020) who builds mobile and full-stack products: React Native and Expo apps, and web applications with Next.js, FastAPI and Supabase. Projects include a multi-role university clearance system with an AI validation layer, a 135-screen examination platform, and a food-ordering app with live API integration. Currently a Mobile Developer Intern at SpringCore Africa and a 400-level Computer Science student at the University of Calabar.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python
Mobile: React Native, Expo, Expo Router, React Query, Zustand
Frontend: Next.js (App Router), React.js, Tailwind CSS
Backend: Node.js, FastAPI, REST API integration, NestJS (learning)
Data and Infrastructure: Supabase, PostgreSQL, Vercel, Git and GitHub
AI: LLM integration into product features, prompt engineering
Payments: Paystack integration

EXPERIENCE

Mobile Developer Intern Mar 2026 – Present
SpringCore Africa | Remote

- Contribute to the Chop-Spot and Quick Consult mobile apps (React Native, Expo, TypeScript) alongside a product team (see Projects).

Industrial Attachment, Software Development Aug 2026 – Nov 2026
Arvys Technologies | University of Calabar placement

Founder 2021 – Present
Angelo Tech | Tech-education community

- Created and run a YouTube channel and WhatsApp learning group that teaches web development to beginners.

SELECTED PROJECTS

SmartClear X 2025
React Native, Expo, TypeScript, Expo Router, AI/LLM integration

- Multi-role mobile platform (students, department officers, bursary, library, admin) that digitises university clearance, replacing a slow paper process.
- Designed and built the role-scoped app and integrated an AI layer for document validation and status prediction.
- MVP delivered and demonstrated to the commissioning University of Calabar staff member; interest from staff at two other Nigerian universities.

Smart Exam Ecosystem 2025
React Native, Expo, TypeScript

- Examination-management platform for the full exam lifecycle, serving 10 user roles including students, invigilators, registrars and vice chancellors.
- Built the 135 screens in a single mobile codebase. MVP complete.

Chop-Spot 2026
React Native, Expo, TypeScript, Expo Router, React Query, Zustand

- Food-ordering app (SpringCore Africa internship): sign-up, login, OTP and password reset; restaurant discovery and search; cart, coupons and checkout; saved addresses; order tracking.
- Integrates the Delichops API for live restaurant and order data.

Quick Consult 2026
React Native, Expo, TypeScript

- Patient-facing mobile app for online medical consultation and appointment booking, connecting users with healthcare providers.
- Built during the SpringCore Africa internship; in development, with a released web version.

RAMCE: Regime-Aware Momentum Composite Engine 2025 – Present

Next.js, FastAPI, Supabase

- Market-intelligence platform tracking 25 financial instruments, using GARCH volatility modelling, Hurst exponent and Shannon entropy to detect market regimes.
- Built the full stack: Next.js interface, FastAPI backend and Supabase data layer.

Angelo Technology 2025 – Present

Next.js 14, Supabase, Paystack

- Multi-vertical digital education platform for the African market (learning tracks, bootcamps, trading academy, tools directory).
- Built the full-stack architecture and integrated Paystack payments across the product lines. Live.

Also: Tasty Cart, a React Native app in development with a released web version.

EDUCATION

B.Sc. Computer Science 2023 – Present

University of Calabar | Currently 400 Level
